KIRKLAND
NURSERY
COMPANY

Bountiful, Utah

To Our Friends:

The roses described in the following pages are the products of the world's leading hybridizers, both old and new, and worthy of a place in the finest rose garden. The descriptions are entirely our own, and every effort has been made to report their performance accurately and truthfully, just as we have observed each variety.

We believe our rose list is the most comprehensive offered anywhere, and for price and quality, we do not believe you can match our values elsewhere. Our plants are strictly two-year-old, field grown, number one grade; the best plants you can buy. There IS a difference when your plants come from Kirkland's.

It has been necessary to increase prices on roses and some other nursery items this year. While the prices on patented roses are established nationally by the patent owners, there has been no advance in prices on other rose varieties by us since 1946, and we sincerely regret that the increased costs of making a living and business operations have occasioned these increases. You will still find that our prices are somewhat lower than those charged by leading Eastern or Western nurseries for the same type of top grade merchandise.

Gratefully yours,

The Kirkland Nursery Co.

SPRING PLANTING IS BEST FOR ROSES

Most of the rose experts in this country, those who really know roses, agree that better results are obtained from Spring planting. We are continually receiving letters and comments from many pleased customers who have realized for the first time the great advantages of planting their roses in the Spring rather than in the Fall. Why worry about providing Winter protection for new plants when you can achieve better results by planting our big husky top grade bushes in the Spring.

They are extra heavy because they have been growing vigorously for 3 months longer than roses offered for Fall planting. A short time after you set them out they will burst into glorious fragrant bloom. The following Winter the problem of protection becomes much simpler because the plants are fully established. Roses for Fall planting must be dug while still in foliage, and the wood is very naturally soft and unripened and these Fall planted bushes suffer severe Winter damage and are often killed entirely in colder sections.

Hence, we strongly urge you to buy and plant your new bushes in the Spring, and as early as it is possible to work the ground.
